RF Industries' RadioMobile Division Awarded \$2.6 Million Wireless Implementation Contract from the Los Angeles County Fire Department

SAN DIEGO, CALIFORNIA, November 8, 2011 . . . **RF Industries' (NASDAQ:RFIL)** RadioMobile Division today announced the award of a \$2.6 million contract from the Los Angeles County Fire Department for the implementation of a wireless system upgrade to the County Fire Department's existing remote communications equipment.

"This is a major step forward for RadioMobile's wireless offerings in the public safety market, including police, fire, emergency and private wireless. This project represents a significant opportunity for RadioMobile to expand its wireless technology and maintenance services to the public sector," said Howard Hill, RFI's Chief Executive Officer.

Jim Moore, President of RadioMobile said, "The Los Angeles County Fire Department presented RadioMobile with a unique challenge. The County's wireless infrastructure system needed to be upgraded from its 1985 technology base to today's demanding data requirements without interruption. RadioMobile has the unique ability to replicate the County's existing technology and simultaneously implement a high speed data solution satisfying FCC Narrowband requirements. We will perform this wireless upgrade without downtime, without interrupting emergency services and without the provision of additional frequencies or wireless sites during the transition period. The County will also benefit from the ability of our mobile applications to exactly mimic their current Cathode Ray Tube-based 1985 functions, thereby eliminating retraining expenses for thousands of fire personnel. With the Federal Communications Commission mandating conversion to narrow band transmission by December 31, 2012, we believe the Los Angeles County Fire Department discovered that RadioMobile's capability to upgrade their network was unmatched in the mobile wireless industry."

About RF Industries

RFI manufactures, designs and distributes Radio Frequency (RF) connectors and cable assemblies, medical cabling products, RF wireless products, and fiber optic cable products. [Coaxial connectors](#), cable assemblies and custom microwave RF connectors are used for Wi-Fi, PCS, radio, test instruments, [computer networks](#), antenna devices, aerospace, OEM and Government agencies. [Medical Cabling](#) and Interconnector products are specialized custom electrical cabling products for the medical equipment monitoring market. [RF Wireless](#) products include digital data transceivers for industrial monitoring, wide area networks, GPS tracking and [mobile wireless](#) network solutions. [Fiber optic](#) cable, connector and harness products serve computer, aerospace, computer networking and specialty applications.

Forward-Looking Statements

The statements contained in this release which are not historical facts may be deemed to contain forward-looking statements with respect to future events, the occurrence of which involve risks and uncertainties, including, without limitation, increased competition, and other uncertainties detailed in the Company's Securities and Exchange Commission filings. All forward-looking statements are based upon information available to the Company on the date they are published and the Company undertakes no obligation to publicly update or revise any forward- looking statements to reflect events or new information after the date of this release.
